DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by AAP
(Applicant's Admitted Prior art).

The AAP (specification page 1, line 22-page 2, line 10) teaches a method for presenting information (SCH bursts) to a mobile station that is transmitted during a common idle frame that contains a set of time slots (GSM standard), comprising arranging individual transmissions (from neighbor base stations) such that all pertinent information for a mobile station is transmitted within the time slots of the common idle frame, without regard for which traffic time slot the mobile station is assigned, i.e., the SCH bursts from the neighbor base stations have no indication regarding for which traffic time slot the mobile station is assigned.

Allowable Subject Matter

3. Claims 2-7 are allowed.

Response to Arguments

4. Applicant's arguments filed 07/14/2004 have been fully considered but they are not persuasive.

Applicant argues that the APA does not address that "the common idle frame contains a set of time slots." Examiner disagrees.

According to the Specification page 1, line 22-page 2, line 3, the AAP is based on the TDMA protocol of the GSM Standard, therefore, the common idle frame comprises a set of time slots.

Applicant further argues that the AAP does not imply all of the measurement window will occur at the same time.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the measurement window) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

For the reasons as discussed above, Examiner believes that the claim rejection is proper.
